Article Contact Cleaner

Available sizes  
200ml, 400ml

## Product description / Please note

CLEANER is an accurately balanced mixture of high-quality and powerful solvents. The great wetting abilities and the low surface tension enable CLEANER to penetrate quickly into pores to remove oil, grease, dirt and other contaminants. It evaporates quickly without leaving any residue. CLEANER is of universal use wherever a reliable cleaning is required.

## Application

CLEANER allows a gentle but effective cleaning of electromechanical contacts, relays and other electromechanical equipment. It is particularly suitable for precision instruments and delicate electronic components. CLEANER is also a good substitute for ultrasonic cleaning and vapor degreasing. CLEANER is safe to use on paints, plastics and rubber. Electronical devices to be switched-off during cleaning and plug to be taken out. Cleaning instructions should to be taken into account. Further information concerning CLEANER is available in the MSDS.

## Physical Properties

Appearance	clear, colorless liquid
Odor	that of alcohol
Density at 20°C	0,67 [g/cm <sup>3</sup> ]
Flash point	< 0°C
Surface tension	22 [mN/m]
Material compatibility	good
Evaporation	quick and completely

## Storage / Shelf life

Shelf life is 2 years if stored correctly.  
Package after emptying to be disposed via metal scrap.
